NSP | WELCOME TO 2026

After 25 years of development and innovation, a lot has changed in the surfboard industry. Since 2001, NSP has been the original epoxy surfboard brand that pioneered the durable surfboard category along with production innovation, and there is a lot to be proud of globally.

2026 is the year we celebrate our heritage, the things that make NSP unique, and combine them with exciting NEW products and a marketing approach that completes our evolution and capitalises on what NSP stands for.

The surfboard range has been split into three segments to better target its customers. Shapers Union has been rebranded with modern graphics and the new HDT construction.

Core features a fresh Elements, EVO-Tech, and CL-17, our new patent pending Wave Pool technology and Protech has been taken to new heights with the introduction of Protech 2, PU feel with epoxy performance. Foundation is designed to serve the school and rental market better than ever before.

We are stoked to show you what we have in-store for 2026, thanks for working with us.

Enjoy the ride. Just add water!

SECURECELL

Created in 2001 NSP was one of the first epoxy surfboards companies and the first to incorporate model specific molded SecureCell EPS (Expanded Polystyrene) blanks into our surf and SUP manufacturing process.

Compared to many custom manufacturers and other factories who cut their EPS from large poorly fused blocks and then CNC cut to shape creating a high amount of waste and pollutants, NSP and Cobra created EPS moulds for each model allowing steam to fully fuse each cell in every blank to eliminate wastage improving quality and reducing environmental impact.

Equally as important, from the surfing perspective this process produces a core which does not allow water to travel through the blank, a common problem with lesser quality foam when damaged. SecureCell EPS foam is in every NSP epoxy surfboard laminated with bio epoxy resins creating boards that outlast our competition.

While epoxy surfboards are a lot more common in 2026 than in 2001, our 25 years of experience means other brands have a lot of catching up to do as our foam and many other production innovations ensure that not all Epoxy's are created equally.

NSP | SHAPERS UNION

The NSP Shapers Union brings together some of the most respected surfboard shapers from around the world to create boards that support every surfer's journey. It's a collaboration focused on blending years of experience and proven design with NSP's trusted construction technology, offering a range of boards that help surfers progress at every level.

Since its start, the Shapers Union has featured shapers like Carl Schaper from Hawaii, and Tully St. John, Kym Thompson and Marcie O'Neill from Australia. Each one has shaped boards for world champions, and their designs have helped surfers achieve everything from catching their first wave to winning their first contest.

This year, we're excited to welcome Richie Lovett and his Volume Shapes label to the Union, adding modern performance focused designs that resonate with today's surfer. For 2026, we've sharpened the focus on each shaper's unique style, all while making their boards available to surfers worldwide through NSP's global distribution.

Whether you're looking for a high performance shortboard, a classic longboard, or a progressive hybrid, each board from the Shapers Union is built with purpose and crafted by one of the best in the business.

The HDT construction by NSP is a marvel of modern technology, utilising an innovative vacuum epoxy lamination process. The HDT layups have moulded foam cores to ensure precision.

The result is epoxy outer shell is not only incredibly strong but also remarkably lightweight, ensuring effortless manoeuvrability on the waves.

Our CSE construction is for the top performers. With UV-stable resins and satin rub finishes, combined with their biaxial glass and fibre reinforced tail patches add both strength and responsiveness with a traditional surfboard feel.

NSP's Dual Band Carbon Technology ingeniously integrates dual carbon bands into the core of the board, strategically positioned where a traditional surfboard stringer would be.

This innovative approach not only allows for a stringer-less blank but also enhances flex, delivering superior drive and responsiveness. By optimising the flex pattern, these boards offer an exhilaratingly lively feel, providing surfers with unmatched performance and agility on the waves

SHAPERS UNION

CARL SCHAPER - SHAPER

With decades of experience in the shaping bay, Carl Schaper belongs to the higher echelon of shaper royalty on the Hawaiian island of Oahu. Knowing a thing or two about high-performance surfing, Carl shapes for some of the very best surfers out there, including a two-time longboard World Champion, pipeline charger and industry legends like Garrett McNamara (Guinness Book of Records for biggest wave ever ridden).

Schaper's design philosophy

"Keep it simple, stay neutral and make sure the boards are fast. Get the right board for the right guy for the right conditions."

Be sure to check out the high-performance Slot Machine, Pit Cruiser, Pro-9, Butter Knife and the Equalizers.

MARCIE O'NEILL - SHAPER

Legendary shaper Marcie O'Neill, teamed up with NSP to bring some new direction to the already popular Longboard Elements, Funboard and Fish shapes.

Marcie grew up surfing in Australia and started designing surfboards at the Aloha Factory in 1989. Coming from a traditional, yet eccentric background, when you look a little closer at the lines and rockers, you will see how our longboard, funboard and fish have evolved in terms of performance and taken on Marcie's highly regarded style.

Marcie's Tinder-DB design is a perfect match! Available in a variety of sizes and three different constructions, Elements and Protech, the Tinder-DB is an accessible high-performance shortboard that will allow all riders to up their game, in all conditions. This Tinder-DB won't let you down.

TULLY ST. JOHN - SHAPER

Tully St. John is the owner/shaper of the legendary Laguna Bay Longboards from Noosa Heads, Australia. Down to earth and heavily involved in the local longboarding subculture, Tully has been shaping since his early days in high school. His shapes are being used by multiple World Champions, right through to everyday surfers, wanting something truly exceptional under their feet.

Tully's shapes have been honed on the long running walls of Noosa's Surf Reserve and its many surrounding beach breaks.

Available in CSE and HDT, you can feel the glide and flow in each of Tully's refined shapes.

SHAPERS UNION

KYM THOMPSON - SHAPER

Starting at the young age of 15, Kym Thompson made designing surfboards his life's work, designing and shaping everything from single-fin boards, right down to all possible multi-fin configurations. Originally, Kym began his career shaping longboards and as the shortboard era took hold, Kym advanced his skills and transitioned his designs to meet the demands of the market.

From the beginning, dating back to 2001, NSP built a strong partnership with Kym being the mastermind behind the popular Heritage Series. His Endless, Hooligan, Dream Rider and Fighting Fish shapes are integrated in the lightweight and sustainable CocoFlax series.

Kym's last creation, the all-new Atomic Flyer was Kym's latest addition to the line-up, combining a retro look with performance features designed for intermediate to advanced riders.

RICHIE LOVETT - SURFER / SHAPER / DESIGNER

Richie Lovett is a former pro surfer turned surfboard designer and shaper, combining his decades of experience to create surfboards that perform at every level. After a successful 10 years on the elite World Championship Tour, he developed a deep understanding of how and why surfboards work, refining his knowledge alongside some of the best in the industry.

In 2005, a cancer diagnosis and radical hip surgery forced him to relearn how to surf, giving him a new perspective on board design. This journey pushed him to explore all types of shapes, and core focus on making surfing easier, more fun, and highly satisfying for everyday surfers, which ultimately leading Richie to launch Volume Shapes.

NSP | PRO-9

CSE

HDT

The NSP Pro-9 is designed by Carl Schaper as a performance longboard. Meant to be ridden hard, this aggressive longboard shape is ideal for riders who will bury a rail with ease.

Bottom : Soft roll to mid V to V to double concave
Level : Intermediate – pro
Wave type : All conditions

Shape:

The Pro-9 is a longboard with as much shortboard crammed into it as possible. Carl Schaper will often point out the back-third of the board, as it fits almost perfectly on his 6'2" step up, with the same thickness, tail dimensions and rails. The bottom has a soft roll to V in the middle, running into V with a double concave in the tail.

Designed for a single fin or quad fin setup, the Pro-9 is a low-volume, extremely high-performance longboard, capable of doing it all with tons of maneuvering and solid nose-riding!

Fin Setup:

The Pro-9 comes in a 4+1 fin configuration enabling you to be creative in your setup as a quad or thruster. NSP positioned the Surf 10 fin box slightly further back, to enable a 2+1 setup. The Pro-9 comes with FTU boxes for its sidefins, making it compatible with Futures® Fins (fins not included).

NSP | BUTTER KNIFE

A hidden gem - the high-performance shape anyone in the family gets to ride.

Carl Schaper is best known for his longboards, but his Butter Knife is second to none, when it comes to his mini-tank designs.

"We have had so many guys come back so stoked on riding the board they bought for their daughter!"
~ Carl Schaper ~

The Butter Knife with its classic outlines, perfect performance longboard rockers and thought-out volumes is a winner across the board. Suitable for all abilities, ride them as single fins in the smaller conditions and let its nose riding capabilities surprise you. And when it gets a bit punchier, slip in the side bites and you have a perfectly riding board for just about all conditions.

Bottom : Soft roll to mid V to double concave
Level : Beginner - pro
Wave type : 1-6ft

Fin setup:

The Butter Knife has a 4+1 fin configuration, giving you the choice of riding quad, single or thruster. NSP repositioned the center fin slightly towards the back allowing for a thruster setup.

Note: All side fin boxes are FTU (FUTURES Compatible) and the center fin is a Suf 10 box.

NSP | EQUALIZER

CSE

Carl Schaper really loves shaping and designing boards for waves of consequence.

Starting out in Florida and Puerto Rico back in the day, Carl took on longboard shaping requests just to familiarize himself with creating bigger boards. Carl never shied away from designing them and with over 30 years of shaping in Hawaii under his belt, he has some of the very best big wave riders amongst his loyal customers.

The Equalizer shapes are designed with NSP's custom surf lay-up featuring a 36g EPS core, 12mm wood stringer, and proven Hawaiian Gun glassing specs. Timeless outlines and rails combined with modern rockers and bottom contours along with fin placements have been tested and proven to perfection on Oahu's notorious North Shore.

If you are in the business of conquering some very serious waves, getting an Equalizer is the ticket!

Fin setup :

All Equalizers come with 5 FTU fin boxes, compatible with Futures Fins (fins not included).

Bottom : Vee to double concave

Level : Intermediate – pro

NSP | CHOPSTIX

CSE

CHOPSTIX

High-Performance like no other!

The Chopstix is a collaboration between NSP and some of its top riders requesting an allround high-performance shortboard that would allow them to surf at the top of their game when the surf is absolutely firing.

The Chopstix features a clean, rounded tail with a thruster fin setup, combined with a single concave running the length of the board and a unique low-forward rocker allowing you to get into waves early and providing massive acceleration and speed control once surfing.

The essence of the Chopstix is an absurdly predictable board for critical moments and a solid platform for driving off the tail, while giving snaps and gouges a powerful feel.

Bottom : Single concave
Level : Intermediate - pro
Wave type : 1ft - triple overhead

NSP's Dual Band Carbon Technology ingeniously integrates dual carbon bands into the core of the board, strategically positioned where a traditional surfboard stringer would be. This innovative approach not only allows for a stringer-less blank but also enhances flex, delivering superior drive and responsiveness. By optimising the flex pattern, these boards offer an exhilaratingly lively feel, providing surfers with unmatched performance and agility on the waves.

Comes with FTU fin boxes and compatible with Futures® Fins (fins not included).

NSP | SLEEP WALKER

CSE

HDT

The Sleep Walker Longboard, shaped by Tully St. John is an awesome allround longboard. This shape has been road tested and scrutinized by the world's best longboarders all the way through to everyday surfers and by those just starting out to create a formula that works for everyone.

The Sleep Walker is set up for traditional log style surfing with a single fin allowing for long hang tens and paddles into waves very easily. In addition, the Sleep Walker delivers allround flow and turn ability.

This is a great addition to anyone's quiver, it's a great, easy to surf, allround board.

Rail : 50/50 forgiving
Bottom : Single concave with slight chine, to rolled V
Level : Beginner to World Champ
Wave type : 1-6ft

Features:

- Deep entry concave
- Forgiving rails make it easy to nose ride, turn and not to catch
- Good thickness through mid section to easily paddle into waves
- Large nose area for hanging ten
- Medium rocker line so the board doesn't nose dive and allows for great maneuverability

Fin setup:

All Sleep Walkers come with a single Surf 10 center box (fin not included).

NSP | OVERDRIVE

The Overdrive is the latest addition to the range by Tully St. John of Laguna Bay. A design that has evolved over 25 years to become a staple for the world's best longboarders. It forms part of a 2 board quiver with the Sleep Walker, whereas the Sleep Walker excels in smaller longer walled waves the Overdrive also excels in beach breaks and more powerful conditions.

The extra width in the nose, entry concave spiraling into a V through the diamond tail and performance rocker complimented by low boxy rails creates a board that flows, releases and is easy to turn. It is the performance longboard that works in a wide range of conditions for a wide range of people and styles.

The Overdrive is the ultimate allrounder, designed as a competitive longboard with a focus on usability and performance this board is the perfect choice from first board to first place (fins not included).

Fin setup:

The Overdrive HDT comes with a 2+1 setup, consisting of 2x FTU (FUTURES compatible) side fin boxes and a single Surf 10 Center box.

Bottom : Single Concave to Round V
Level : Intermediate to advanced

NSP | SPEED LINE

The Speed Line is a Tully St. John design, the owner and shaper at legendary Laguna Bay Longboards in Noosa, Australia. Tully's shapes have been honed on the long running walls of Noosa's Surf Reserve and its many surrounding beach breaks – the glide and flow of this mid-length design is unmistakable Tully. The Speed Line is your all-day, everyday funboard with a modern classic design. A wide point forward section, a pulled in tail and soft rails contribute to ease of paddling and effortless trim. It has drive for miles and a loose tail, thanks to a single to double concave. Available in three sizes, there is a classic Noosa Speed Line for everyone.

Fin cluster:

Designed as a 4+1 (fins not included), the Speed Line accommodates a variety of fin configurations to suit your style. Whether you're charging hollow reef breaks or flowing through Noosa's peeling points, this board makes it all feel effortless and within reach.

Rail : Full
Bottom : Single to V
Ideal waves : 2-6ft
Level : Beginner – Expert

Laguna Bay Unicorn

The magic of Laguna Bay Unicorn by NSP, is it's a board you never thought existed but in reality now you can't imagine living without. The blend of old school charm and modern design, crafted for those who want both a maneuverable beast as well as a trim machine set to fly.

The Unicorn carries a wide point forward, with ample thickness and width in the nose for dreamy nose rides, while it's pulled in tail ensures it turns on a dime. This model has been a fusion of the best features from the iconic Sleepwalker by Tully St John at Laguna Bay Longboard, the teardrop concave, smooth rails, and traditional rocker, all wrapped in a high performance outline.

Let's talk about that tail again! It's where the magic happens. A super sharp, chamfered edge through the last 12 to 14 inches means this board grips the wave like no other in this class or style. The Unicorn is all about control and responsiveness, whether you're gliding down the line at your favorite point break or ripping into a peaky beach break this is an edge you can rely on.

Built with NSP's HDT construction, the Unicorn combines durability and light-weight performance. The epoxy resin, advanced custom lay up and stringered EPS core offer a responsive flex pattern, enhancing your connection to the wave without compromising response or feel. This board isn't just for those lazy, knee high days, it's been brought into the NSP Shapers Union lineup ready to change your longboard sessions when the surf gets serious. Tame the mythical beast and glide in style on your Unicorn (fin not included).

Fin setup :

All NSP Unicorns come with a single Surf 10 center fin box, fin not included.

Rail : Pinched 50/50 to Sharp Chamfered Tail
Bottom : Accentuated single concave, slight chine to rolled V
Rider : Beginner to World Champ
Wave Type : 1- 6 ft

NSP | SLOT MACHINE

CSE

Created on the North Shore, Slot Machines are the culmination of 45 years of designing, shaping, and building boards by Carl Schaper. Tested in various contests by Team Riders, Slot Machines are well-balanced shortboards that excel in the most demanding of conditions.

The Slot Machine is a thinner, lower-volume version of the Pit Cruiser by Carl with a slightly more pulled nose and tail. These adjustments combined with the squash tail, allow you to ride harder and launch yourself into critical sections knowing your boards built to go fast with control!

Bottom : Single To V
Level : Heavier intermediate to advanced
Wave type : Shoulder high – triple overhead

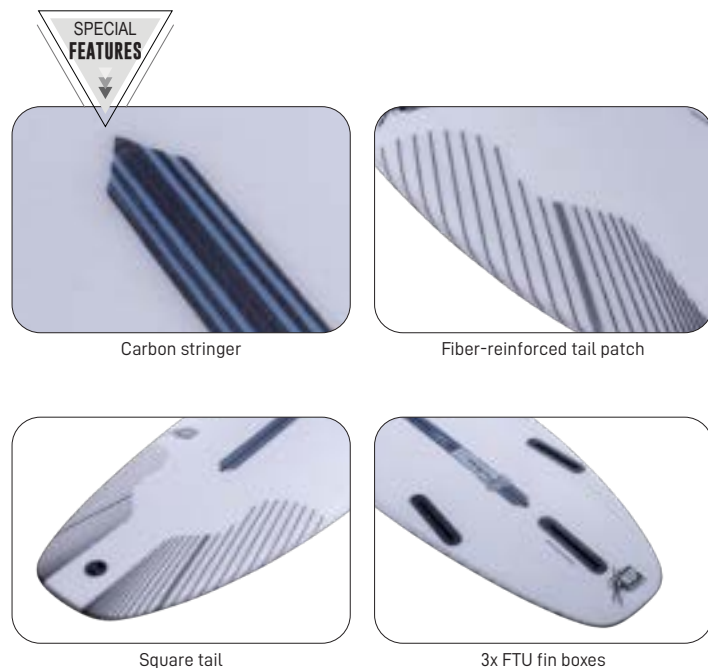

Construction/Lay-up:

NSP's Dual Band Carbon Technology ingeniously integrates dual carbon bands into the core of the board, strategically positioned where a traditional surfboard stringer would be. This innovative approach not only allows for a stringer-less blank but also enhances flex, delivering superior drive and responsiveness. By optimising the flex pattern, these boards offer an exhilaratingly lively feel, providing surfers with unmatched performance and agility on the waves.

Fins:

Available with 3 FTU fin boxes and compatible with Futures® Fins (fins not included), these are pure thrusters.

Designer : Carl Schaper

SPECS

NSP | PIT CRUISER

CSE

Created on the North Shore, a Pit Cruiser is the culmination of 45 years of designing, shaping, and building boards by Carl Schaper. Tested in various contests by Team Riders, Pit Cruisers are well-balanced shortboards that excel in the most demanding of conditions.

The Pit Cruiser is essentially a larger version of the Slot Machine, with additional width and volume but carefully avoiding "tennis ball rails". An elegant rail profile with a squashed tail allows you to unload on the rail, taking a good hack off the top.

Bottom : Single To V
Level : Heavier intermediate to advanced
Wave type : Shoulder high – triple overhead

Construction/Lay-up:

NSP's Dual Band Carbon Technology ingeniously integrates dual carbon bands into the core of the board, strategically positioned where a traditional surfboard stringer would be. This innovative approach not only allows for a stringer-less blank but also enhances flex, delivering superior drive and responsiveness. By optimising the flex pattern, these boards offer an exhilaratingly lively feel, providing surfers with unmatched performance and agility on the waves.

NSP | VOLUME - HYBRID X

NEW
DESIGN

NEW
SHAPE

CSE

The Hybrid X is the third iteration of the Hybrid series with a focus on better paddle efficiency, start-up speed, and stability up front. With the wide point and thickness pushed forward to maximise foam distribution under the chest and towards the rails, this the best paddler of the Hybrid series.

The design goal with the Hybrid X was to create a board that paddled into waves really easy, then once up and riding, the back half of the board performs like a high performance shortboard. The tail measurement on this model is narrower compared to the Hybrid and Hybrid+, so when your back foot is planted over the fins, it will respond and turn on demand and also hold-in nicely when the waves are steeper and more powerful.

The entry rocker has been relaxed to allow for quicker start-up acceleration and speed from the take-off. This design tweak is also a bonus when the waves are flatter, and you have to work the board for speed. Lastly, the concaves have been softened to enhance the feelings of predictability and flow when transitioning from rail-to-rail.

Built in NSP's CSE construction with a stringered SecureCell foam core, which compliments the Volume Hybrid X perfectly to deliver a responsive, high performance hybrid that suits all wave types offering the light flighty durability to match.

Fast with lots of flow, the Hybrid X targets the intermediate-to-experienced surfer wanting a super reliable, performance based allrounder for small-to-medium size waves. This model is also valid as a travel companion for shredders not wanting to compromise on a performance approach to wave riding.

Rail : 50% Drive & Speed / 50% Pivot & Response.
Contours : Front - Subtle Single Concave.
 Back - Subtle Single + Double Concave.
Construction : Secure Cell EPS + Stringer / Fiberglass / Epoxy Resin.
Wave type : 1- 6 Feet (Ankle High - Overhead).

Fin recommendations: (Fins not included)
 FCS II Accelerator or Toledo (Predictable feel with added control)
 FCS II Reactor (Ideal for perfecting tighter turns)

Shaper : Richie Lovett

NSP | VOLUME - FISH

NEW
DESIGN

NEW
SHAPE

CSE

The Volume Fish takes the confusion out of choosing just one board for every day use. This is a modern utility fish, meaning it'll work in a variety of conditions for most surfers.

The foam distribution on this model is generous enough to offer greater buoyancy and paddle power, yet it won't restrict you from jamming a tight turn when the wave offers up a nice section. It was designed to feel predictable underfoot but still have a responsive feel off the tail when making quick direction changes.

One of the notable features is the flyer positioned just behind the side fins to elevate the board's performance. This creates a narrower tail providing more control and bite in bigger, steeper waves.

Built in NSP's CSE construction with a stringered SecureCell foam core, the Volume Fish offers a balanced combination of durability and lively performance, giving you the confidence to ride a wide range of conditions, day in and day out.

Targeted at the committed surfer who might be struggling for speed and acceleration on a lower volume board, or for anyone whose skills have surpassed a longer, wider funboard. This model will enhance your progression from an intermediate into the more experienced class.

- Rocker :** 55% drive and speed, 45% pivot and response.
- Contours :** Front - Single Concave.
Back - Single plus Double Concave.
- Construction :** Secure Cell EPS + Stringer / Fiberglass / Epoxy Resin.
- Wave size :** 2- 6 Feet (Ankle High - Overhead).

Fin recommendations: (Fins not included)
FCS II Accelerator (Predictable feel with added control)

NSP | VOLUME - MIDLENGTH

NEW
DESIGN

NEW
SHAPE

CSE

The Volume Midlength has nothing to do with middle-age laziness and everything to do with maintaining your wave count and delivering quality water time, you might even surprise yourself and turn into a wave pig.

From ankle high to overhead, this board has been tuned so you can paddle onto waves early, set your line and go. Once up and riding there's enough performance in this shape to slice a long curve, drive effortlessly through a roundhouse cutback and pivot smoothly off the top.

Featuring classic curves from the 70's, combined with a contemporary array of concaves on the bottom, that offers a smooth yet highly responsive feel for a board of this length.

Built in NSP's CSE construction with a stringered SecureCell foam core, the Volume Mid delivers a responsive yet durable ride, ensuring long-lasting performance without sacrificing the lively feel that keeps you coming back for more.

The Volume Midlength offers exceptional trim speed over flatter sections and the ability to duck and weave through steeper parts of the wave, this is the perfect board for dedicated surfers wanting to maintain their status in the line-up, and the older crew needing to keep up with the kids.

Rocker : 40% Drive & Speed / 30% Flow / 30% Pivot & Response.
Contours : Front - Vee.
 Back - Double Concave Vee.
Construction : Secure Cell EPS + Stringer / Fiberglass / Epoxy Resin.
Wave size : 1- 6 Feet (Flat - Overhead).

HDT CONSTRUCTION

NSP's High Definition Technology (HDT) construction redefines the boundaries of the laws of surfboard production. Now, it is possible to have a board that is incredibly tough, lightweight and high-performance at an affordable price.

Created specifically for our Shapers Union range, HDT pairs high performance design with precision molding technology ensuring accurate reproduction and dynamic flex characteristics. HDT uses a model specific, fully fused and water resistant SecureCell EPS Core, military grade fibreglass and foaming epoxy resin moulded in our high tech vacuum moulds creating 30% less material wastage and environmental impact of a traditional surfboard.

HDT also creates an exceptionally durable shell that offers unmatched strength and lightweight performance with 50% higher breakage strength at lower weights than PU. Implemented at the request of some of the world's best board builders in the Shapers Union, NSP HDT construction provides consistent performance and durability session after session, elevating the surfing experience with premium materials and innovative technology.

NSP | CORE

The bread and butter of the NSP Range. The Core collection offers a range of constructions to meet the wide range of customer preference while honoring our company vision statement: "To inspire people of all ages and skill levels worldwide to get on the water enjoying nature, embracing the water sports culture and lifestyle, through well-designed, durable and high-value gear made for everyone"

Reliable shapes and revolutionary constructions create boards that exceed customers expectations.
For over 25 years NSP has forged this reputation and helped more surfers than any other brand begin and keep surfing.

NSP | MAGNET NEW DESIGN

PROTECH 2

The NSP Magnet is designed to offer a smooth and stable ride, whether you're just starting out or looking to progress your skills. It delivers versatility across a wide range of wave conditions and is perfect for those seeking a fun, responsive, and adaptable board.

Rail : Full
Bottom : Single to V
Level : Beginner - Expert
Wave type : 1-6ft

The Magnet's shape features a balanced outline for stability, while the slightly wider nose aids with paddle power and wave entry. The narrow tail enhances control, allowing for smooth, responsive turns when the wave presents the right opportunity. This combination makes the Magnet forgiving yet capable, ideal for increasing your wave count or finding your feet on a more manoeuvrable intermediate option.

Equipped with NSP's Protech 2 construction, the Magnet provides excellent durability and lightweight performance. It strikes the perfect balance between stability and manoeuvrability, giving riders confidence and control, whether catching their first wave or pushing their limits on bigger sets. The Magnet is a great choice for those looking to progress, with its solid design supporting your growth and providing an enjoyable ride along the way.

Fin setup :
 The Magnet Protech 2 comes with NSP's 3x FTU boxes (all compatible with Futures® Fins) and a set of matching MFC-designed thrusters.

PROTECH 2

PROTECH 2

The Kingfish was designed for surfers who want a forgiving and fast board that works across all wave types but excels in weaker and mushy waves.

With its higher volume, fish outline and less rocker than traditional shortboards, it's the perfect board choice for those looking for both stability and acceleration in less than ideal surf.

Rail : Boxy
Bottom : Single to Double Concave, V through the Tail
Level : Beginner - Expert
Wave Type : 1-6ft

The wide area through the chest adds valuable flotation and paddle power, letting you get into waves early with less effort. Perfect for smaller, slower waves where you need a bit of help getting in, while still allowing for smooth acceleration once you're up and riding.

The fuller rail profile increases the board's overall volume, providing a more forgiving feel that's easier to manage, especially when learning or transitioning to a more advanced skill level craft. Crafted with NSP's Protech 2 construction and a durable SecureCell core, the Kingfish is light but tough, giving you a board that stands up to daily use without sacrificing performance.

Fast, fun, and built to keep you moving, the Protech 2 Kingfish delivers the speed and flow you want in smaller, weaker surf while still holding its own when things pick up. If you want a board that gets you into waves early, powers through dead sections, and still lets you push your turns, the Protech 2 Kingfish is exactly what you're looking for.

NSP | DOUBLE VISION

Elements

The Double Vision is a retro twin, built in Elements and comes with a Keel Twin setup for hold and stability in the big stuff. Available in four sizes, Double Vision riders get to enjoy the drive and speed of a fish twinnie. More maneuverable and more responsive than thick, wider Fishes, a Double Vision has a rewarding feel, making it core-quiver material for anyone who tries one.

Rail : Full
Bottom : Concave into V
Level : Beginner - Expert
Wave type : 1-5ft

Design:

- Inspired by classic fish shapes, the Double Vision evolved into a thinned-out version of the vintage Fish shape for more drive and speed
- The parallel outline, fish rocker and the omitting of a center fin all contribute to a faster ride
- High-quality materials finished with a satin rub for a custom board finish.
- FTU fin boxes (compatible with Futures® Fins) on all sizes.

Fin cluster and construction:

The Double Vision comes with two FTU fin boxes (compatible with Futures® fins) and a set of keels. Try conventional twin fins for a loosened ride and improved maneuverability.

A Double Vision is glassed with 4oz+6oz on the deck and 6oz+4oz with a butterfly patch for the bottom.

NSP | LONGBOARD

NEW
DESIGN

Elements

PROTECH 2

The Longboard is part of the refreshed NSP Longboard range: A perfect addition to any surfer's quiver and an exceptional shape for longboard surfers looking to fast-track their skills. The NSP Longboard Protech 2 is a proven shape in a premium construction, at a very attractive price point.

Rail : Full
Bottom : Single to double concave
Level : Beginner – Expert
Wave type : 1-6ft

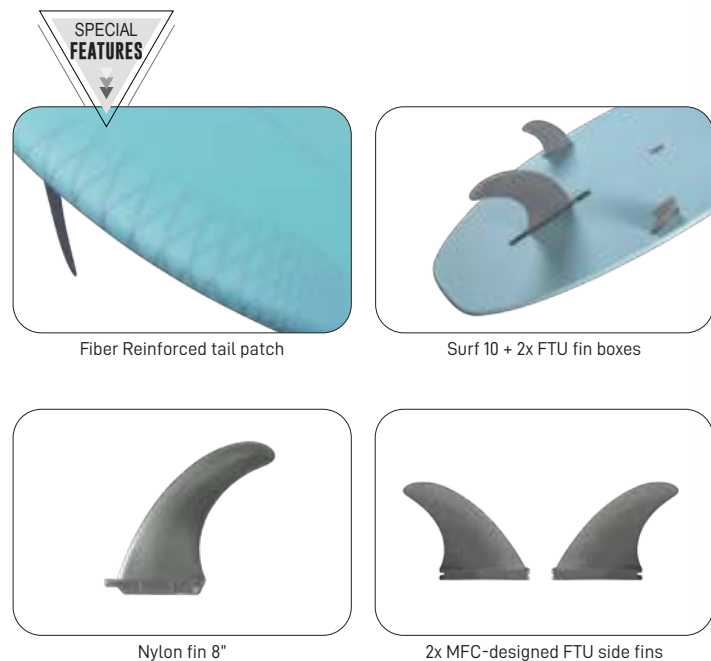

- Fiber reinforced tail patch helps tune the tail flex, mimicking the flex patterns of pro customs.
- The best in versatile longboard performance, using technically advanced construction at extremely attractive retail prices.
- A classic shape for swooping bottom turns, high trim lines and drop knee cutbacks.
- New sharper rails in the tail, modern performance rocker combined with mellow V bottom blended with a subtle double concave
- Easy board to trim on the wave and dynamic when riding off the tail.

Constructed in NSP's high-performance Protech 2 technology with a 36g molded Secure-cell EPS core with custom wet lamination.

The tint lamination process provides each board with its own unique, rustic and custom-like finish. A visually appealing board!

A perfect addition to any surfer's quiver and an exceptional longboard for recreational surfers looking to fast-track their skills. A proven classic for stylish wave riders.

Fins :
The Longboard Protech 2 have 2 FTU fin boxes (all compatible with Futures® Fins) and comes out of the box with 2 MFC-designed side fins and one 8" center fin. The Longboard Elements 10" comes with a 9" center fin.

NSP | FUNBOARD

Elements

Designed for the weekend warrior. Paddles easily and catches waves early, gets you up and riding more often. The NSP Funboard is a classic mid-length Malibu, and our most popular shape ever.

Rail : Medium
Bottom : Single to V
Level : Beginner - Expert
Wave type : 1-6ft

- Reinforced carbon tail patch helps tune the tail flex, mimicking the flex patterns of pro customs.
- A stunning combination of fantastic value, durability and performance, the Funboard is one of the most popular boards in the NSP range for progressing skills.
- Semi-rounded nose with low entry rocker design puts more volume up front to give more paddle power to catch waves early and easily.
- Domed deck profile allows a forgiving but sensitive rail feel while the rounded pintail is pulled in, adding control in bottom turns and cutbacks.
- Concave bottom creates a fast water transition through to the tail, providing balance and control in a wide range of conditions. Constructed in NSP's high-performance Protech technology with a 36g molded Secure-cell EPS core with custom wet lamination.

The tint lamination process provides each board with its own unique, artsy and custom-like finish. A visually appealing board!

The NSP Funboard is the clear "next-step" board for surfers looking to downsize, and an overall great board to have for all kinds of conditions.

Fins:

The Funboard Protech models are available with NSP's 3x FTU boxes (all compatible with Futures® Fins) and comes out of the box with 3 MFC-designed fins.

NSP | FISH

Elements

More than just a groveler, the Fish Elements is designed for speed, stability, and effortless paddling. Its wide outline and flatter rocker help you catch waves with ease, while the classic fish tail delivers fast, flowing rides in a variety of conditions. The perfect combination of durability, performance, and value, this board keeps you stoked session after session.

Rail : Boxy
Bottom : Concave into V
Level : Beginner - Expert
Wave type : 1-6ft

- Wide nose creates more volume for added buoyancy providing more stability, faster paddling, and easy entry into the smallest waves with quick acceleration.
- Rocker and rail outline are combined with single to double concave bottom, with V through the tail incorporated into a wide swallow tail.
- The slight hip behind the front fins reduces the area under the back foot creating a pivot point for snappy turns. Boxy and full rails also add to the overall volume and for giving nature of this model.
- The Fish performance delivers traction, down the line speed and maximum drive over the fattest of sections.

No matter the conditions, the Fish Elements is ready to perform. It thrives in small to medium surf, excelling when the waves turn lacklustre and you need extra speed. Go with a quad setup for added grip and acceleration, or switch to a thruster for more drive and speed through turns giving you a more responsive ride when the waves have more push.

Fins:
 The Fish Elements is available in NSP's 5x FTU fin box setup (compatible with Futures® fins).

The Fish Elements comes with a nylon set of MFC-designed thrusters.

NSP | DOUBLE UP NEW DESIGN

PROTECH 2

Twice the paddle power, twice the fun. The Protech 2 Double Up takes the best elements of a longboard, stability, glide, and effortless wave catching, and packs them into a more manoeuvrable mid length shape. Whether you're stepping down from a bigger board or just want more volume without the bulk, the Double Up makes every session easier and more enjoyable.

- Rail :** Full
- Bottom :** Concave into V
- Level :** Beginner to Expert
- Wave Type :** 1 to 6ft

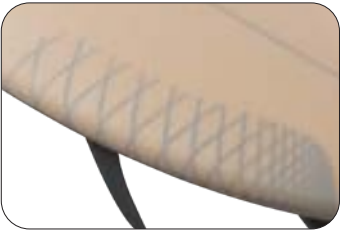

With plenty of volume under your chest, this board paddles like a dream, getting you in early and letting you flow through sections with ease. A mild lift in the nose and tail keeps things loose, while the double rolled concave in the back half adds responsiveness for smooth, confident turns. Bigger surfers will love the extra float, and intermediates progressing from their first board will appreciate the added stability without sacrificing manoeuvrability.

Finished in NSP's Protech 2 construction, the Double Up is light, durable, and built for long lasting performance. Whether you're cruising small summer waves or pushing your surfing further, this board gives you the confidence to go all in.

Fin setup :
The Double Up Protech 2 comes with a 2+1 setup, including a nylon 8" center fin and 2x FTU (FUTURES compatible) side fins designed by MFC.

NSP | TINDER-D8 NEW DESIGN

Elements

PROTECH 2

TINDER D8

Whether you swipe right, left, or even up, the Tinder-D8 is never going to let you down! Designed by Marcie O'Neill, the Tinder-D8 is a high-performance, all-round shortboard that excels in all conditions.

With a rounded square tail and 3 or 5 fin FTU option depending on construction, the Tinder-D8 features a single concave from the mid-section transitioning to a double out the fins. Combined with a flatter rocker, this design gets you down the line fast, keeps you in the pocket, and enhances your manoeuvres.

Bottom : Single to Double Concave
Level : Intermediate - Expert
Wave Type : All Conditions

This board's hybrid shape incorporates more volume than the Chopstix, especially in the nose, making paddling and wave-catching easier. The tail provides balance and speed, thanks to the flatter rocker.

The Tinder-D8 continues NSP's high-performance shortboard lineup, offering accessible shortboard performance with key hybrid shape elements. It's your go-to for catching more waves and maximising fun in every session.

If you are looking for a high performance, all-round shortboard that performs great in all conditions, this might be your perfect match.

NSP | HYBRID

Elements

High-performance meets paddling power, in the most versatile and user-friendly intermediate shortboard on the market. Elements construction adds considerable durability to the package with a performance envelope that accommodates any wave situation.

Rail : Full
Bottom : Single to double concave
Level : Intermediate - Expert
Wave type : 1-6ft

- The popular Hybrid is designed with the tail of a short board for performance and the wider nose of a Fish to maximize paddling power and stability.
- Performance rails, bottom rocker to make it fast, stable and maneuverable on the wave.
- The flatter rocker and added width catches waves easily and generates speed combined with a pulled in round tail for bite and hold through rail turns and in steeper waves.
- Comes supplied with 3 MFC-designed FTU fins.
- On smaller days, go quad, and keep the thruster setup for bigger days when conditions lend themselves for slicing.

Ideal for intermediate to advanced surfers seeking one of the most versatile and user-friendly shortboards on the market. The Hybrid suits any wave situation from beach breaks to point breaks.

NSP | CI-17

In 2001 NSP created the durable surfboard category enabling retailers, schools, and rental centres worldwide to supply extremely high-value surfboards with unbeatable durability, allowing more surfers to begin their surfing journey than ever before.

Fast forward 23 years NSP in conjunction with Cobra International, the leader of construction technology, has again set the bar with a wave pool-specific technology innovation aptly named CI-17 (Chlorine).

CI-17 is a proprietary quantum leap combining core construction, leading edge composites and thermoforming technology to provide a solution to the pain points of Wave Pool operations. By looking at and listening to pool operators about how traditional constructions fail in a non-traditional environment we have focused on creating a board that provides performance with a greater ROI for operators with less damage and time out of the water.

CI-17 has been tested and proven by wave pool professionals to ride well with an extremely high tolerance to the unique demands of this punishing environment. If your facility would prefer to focus on keeping your customers stoked rather than constant repair of your school and rental fleet, then the NSP CI-17 technology is the solution for you. Designed for the weekend warrior. Paddles easily and catches waves early, gets you up and riding more often. The NSP Funboard is a classic mid-length Malibu, and our most popular shape ever.

Tech features:

- FTU Fin Boxes, compatible with Futures Fins.
- Nylon Fins included.
- Proprietary CI-17 construction technology.
- Range of performance, recreational and fun designs.
- Tested in a wave pool environment.

NSP | EVO TECH

Based on our most popular shapes, the Evotech features NSP's durable tech, wrapped in a soft shell to support the next step in a surfer's evolution.

The Evo Tech models have been meticulously designed to combine performance and durability. The foam cores of the Evo Tech softboards are crafted from a purpose molded, fully fused SecureCell EPS, ensuring lightweight performance with excellent buoyancy and added durability.

The vacuum bagged foam outer layer ensures a precise and durable bond between the core and the outer skin, maintaining the board's integrity along with also offering a wax-free, thermo molded EVA skin.

The top and bottom layers are reinforced with fiberglass, adding to the board's structural strength. The Longboard version includes dual fiberglass T-stringers internally for additional rigidity, where as the funboard and hybrid options remain stringerless.

Each Evotech board is finished with hand-shaped rails, providing precise control through turns and enhanced performance in the water.

Whether you're a beginner looking to progress or an experienced surfer seeking a reliable softboard to up your wave count, the Evotech provides the ideal balance of safety without compromising performance and practicality.

- 2+1 finbox setup on Longboard.
- Full set of fins included with each board.

NSP | FOUNDATION

In 2001 NSP was released the market revolutionising the surfboard industry with boards that redefined durability and usability. With immediate global success we can legitimately claim that more surfers have surfed for the first time on an NSP than any other brand in the world.

Over 25 years later, these same boards are still the choice for the worlds largest schools and rental locations.

The Foundation range is just that; the range that founded NSP.

Boards that are very hard to kill. Boards that have created an expectation by surfers globally that Epoxy is strong.

Boards that are the core of the DNA of the NSP brand.

The foundation range while focussed on creating the best boards available to extremely demanding environments are our beginning and set the precedent to follow as a brand.

With strong foundations we can grow.

NSP | FUNBOARD

The Funboard E+ is specifically designed for the weekend warrior and rental venues. Paddles easy and catches waves early, it will get you up and riding more often. The Funboard E+, these boards are resilient and will perform.

Consider the NSP funboard the "in-between" – halfway between the longboard and the fish. Often considered the next step for a surfer who has spent enough time practicing on a longboard. Not quite ready yet for a fish or a shortboard, Funboard E+ are a great platform for quick progression, whether you are renting at a surf school or as an owner of an Funboard E+

Rail : Full
Bottom : Single to V
Level : Beginner - Expert
Wave type : 1-6ft

- New graphic updates for retailers, and rental centers to easily distinguish between board sizes.
- Semi-rounded nose with low entry rocker design puts more volume upfront to give more paddle power to catch waves early and easily.
- Domed deck profile allows a forgiving but sensitive rail feel while the rounded pintail is pulled in adding control in bottom turns and cutbacks.
- Concave bottom creates a fast water transition through to the tail providing balance and control in a range of conditions.

Fins:

The Funboard E+ has all new 3 x FTU boxes (all compatible with Futures® Fins) and comes out of the box with 3 x MFC-designed fins.

The Longboard P2 is great for smaller surfers or beginners who want to try a higher-performance shape. Customers looking for a proven longboard shape with a full-EVA top are well-served with a Longboard P2.

Rail : Full
Bottom : Flat
Level : Beginner – Intermediate
Wave type : 1-6ft

- A proven classic for swooping bottom turns, high trim lines and drop knee cutbacks.
- Easy board to trim on the wave and dynamic when riding off the tail.
- High density rubber and tail bumpers for added protection and durability.
- Fiberglass T-stringers for added strength & durability.
- Bolt-through thruster fins for added durability.
- Crocodile skin texture on the deck skin increases durability and grip.
- Fast slick skin HD bottom

The Ideal Soft Board for Learning

The NSP Sundowner is designed for beginners who want a stable, user-friendly board to build confidence and improve quickly. With a balanced shape and just the right amount of volume, it makes catching waves and progressing easy.

For those who don't need a heavy-duty school board, the Sundowner offers a durable, lightweight alternative. It's also perfect for travel or as a go-to soft board for family and friends-always ready for fun in the water.

Sundowner Features

- Thermoformed PE Deck and Rail – Durable and comfortable underfoot
- Molded EPS Core – Lightweight with integrated fiberglass-reinforced bamboo stringers
- Stringer System – Two stringers in 6'0", 6'6", 7'0", and 8'0" models; three stringers in the 9'0" model for added stiffness
- PE Slick Bottom – Smooth, durable surface for consistent glide
- Fins included

Whether you're catching your first wave, looking for a reliable travel board, or just want a fun, hassle-free ride that doesn't break the bank, the Sundowner delivers! Built for long-lasting performance, this is the soft board you'll keep reaching for, session after session.

Fins :

NSP Sundowners come with three FTU-fin boxes (FUTURES compatible) and a set of MFC-designed thrusters. The 9'0" is the exception with a single 9" nylon dolphin fin.

NSP | TEACHER'S PET

FOAMIES

SECURECELL

Learn to surf...

Accentuated front and rear rockers makes this board paddle well and take the drop better than most boards out there (no more nose digging or wheelies).

A Learn to Surf setup with its positioning markings for paddle, hand placement and ultimately foot placement is a favorite as it takes guesswork out of the equation.

The Teacher's Pet brings a sense of security. Increases both ride and wave count for beginners and drastically increases progress, thanks to its built-to-learn design.

In a sport that hasn't changed much in over 30 years, the Teacher's Pet offers quality and instills confidence, allowing beginners to progress faster than ever.

Straight A's with the all new Teacher's Pet!

Details:

- PE deck and rail
- Learn to Surf teaching guides for easy hand placement
- Ridges on the tail for easy learning and foot positions
- CNC-cut and hand-finished EPS core with integrated fiberglass reinforced bamboo stringers
- Bamboo stringers: 7'0 (2) / 8'4 (3) / 10'0 (4)
- PE slick bottom
- Extra strong nose and tail reinforcement on 10'0
- Bottom handle on all boards
- Bolt-through thruster fin set for added durability

TECHNOLOGIES

FUNBOARD / LONGBOARD

Unrivalled strength and durability.

- NSP's best-selling shapes all come in E+ construction.
- EPS Secure-cell core.
- E+ boards come with an additional wide fiberglass stringer for maximum strength.
- MFC designed nylon fins included with each board.
- Features extremely tough military-grade fibers and ASA sheet creating a ballistic skin on deck and bottom.
- New NSP designed FTU fin boxes (compatible with Futures® Fins) on all models (except 10'0" and 11'0" longboards).

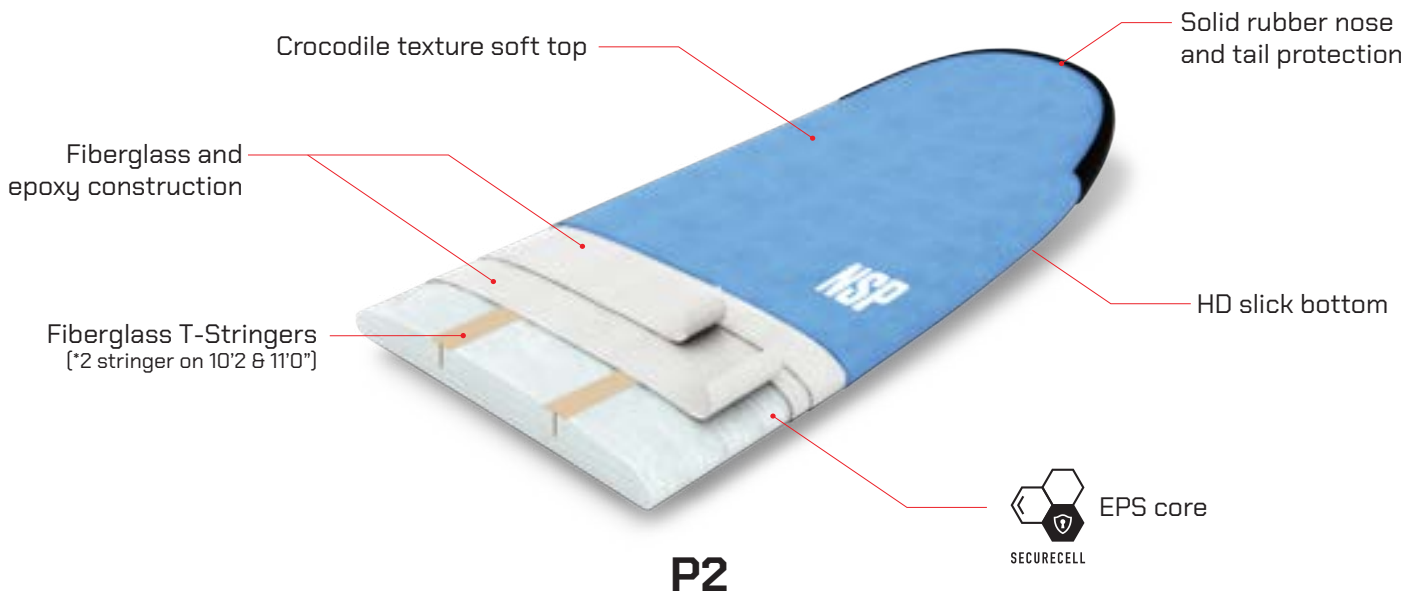

TECHNOLOGIES

LONGBOARD / SURF WIDE

P2 stands for soft tops. It's NSP's top of the line built to outlast conventional soft boards. P2 soft boards are ideal for entry-level surfers looking to catch their first wave.

- The P2 Core uses EPS technology, fully glassed in a durable fiber epoxy shell.
- Finished with a polyethylene soft-top deck and HD slick bottom skin.
- All P2 boards are fitted with high-end accessories for safety and ease of use.
- Rubber bumpers on nose and tail and neoprene handles on Surf Wide models greatly increase instructor board control.
- P2 Soft boards come with durable, but easy-to-replace bolt-through thruster fins.
- All Surf Wide and Longboards in P2 construction come with two additional fiberglass T-Stringers for maximum strength.

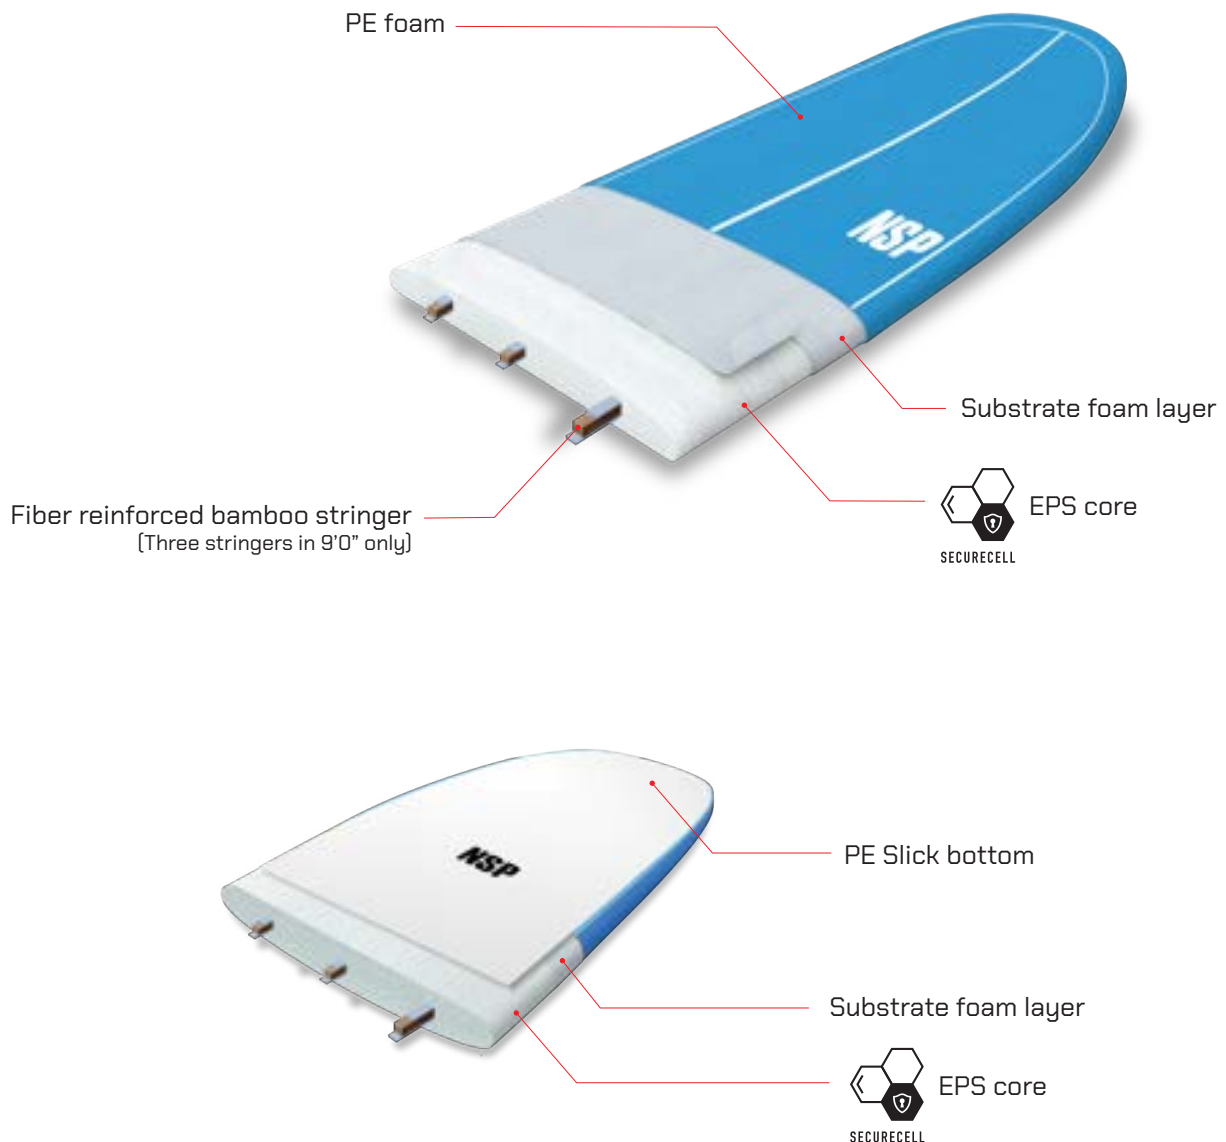

FOAMIES

SUNDOWNER

The Sundowner is about convenience - boards that you can bring anywhere, without worrying your custom gets folded. Remember the agony you felt when your holiday spot was pumping but the rentals were all out? Bring a Sundowner next time. If you're not going to ride it, someone else will!

- PE Deck and Rail.
- Molded EPS Core with integrated fiberglass-reinforced bamboo stringers.
- Two stringers on 6'6" / 7'0" / 8'0" / three stringers / 9'0".
- PE Slick Bottom.
- Printed lines on the tail for easy learning and foot positions.

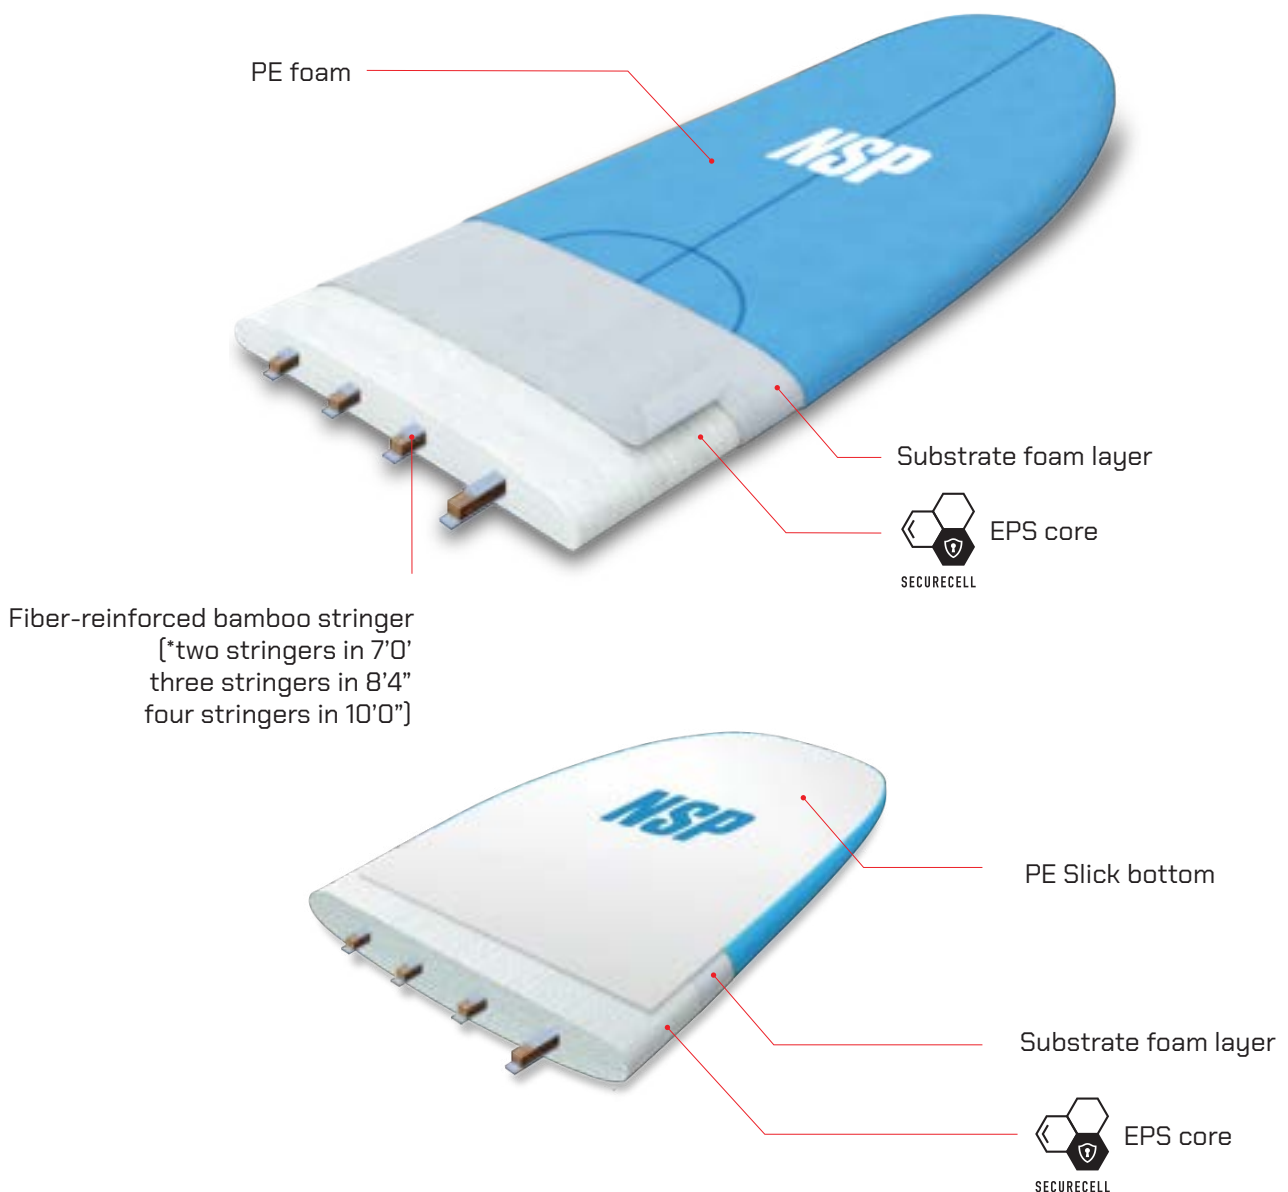

FOAMIES

TEACHER'S PET

The Teacher's Pet brings a sense of security, increases both ride- and wave count for beginners and drastically increases progress, thanks to its built-to-learn design. In a sport that hasn't changed much in over 30 years, the Teacher's Pet offers quality and confidence, allowing beginners to progress faster than ever. Straight A's with the all-new Teacher's Pet!

- Learn-to-surf teaching guide & textured deck for easy hand placement.
- Multi-textured ridges on the tail for easy learning and foot positions.
- CNC-cut and hand-finished EPS core with integrated fiberglass-reinforced bamboo stringers.
- Two, three and even four bamboo stringers: 7'0 (2) / 8'4 (3) / 10'0 (4).
- PE slick bottom.
- Bolt-through leash plug.
- Extra strong nose and tail reinforcement on the 10'0.
- Bottom handle on all boards..

NSP | REDLINE RESCUE

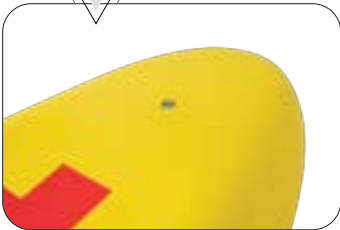

The Redline Rescue Board by NSP is the gold standard in ocean water safety, engineered with precision to meet the demands of lifeguard teams worldwide. Designed to prevent tragedy, this board has been trusted by professionals across the globe to provide reliable performance when lives are on the line.

For event organisers, lifeguard organisations, and private beach venues, equipping your team with the NSP Redline Rescue Board is not just a choice, it's an investment in proven, life saving technology. Built to endure the harshest conditions, these boards are made to last, standing ready through years of exposure to sun, salt, and sand.

When that critical moment arrives, and every second counts, you can depend on the NSP Redline Rescue Board to deliver the performance and reliability needed to save lives.

Features :

- Gore Tex Air Vent
- 8mm soft knee pads
- Poly-reinforced tube handle, covered by nylon webbing all around the board
- Designed-to-spec rescue fin in line with ILS rescue board standards
- Weight 12 kg +/-

NSP | SOFT TOP SURF RESCUE

Equipped with a full PE thermoformed deck for grip, comfort, and efficiency, the Soft Top/Slick Bottom construction is a lifeguard's essential ally in emergency situations.

The board's design considers every detail, ensuring that it not only performs under pressure but also provides the durability and reliability required for repeated use in harsh conditions. The rubber bumpers on the nose and tail act as protective shields, absorbing impacts and preserving the board's integrity over time. The strategically placed handles on each side enable swift, secure handling, giving lifeguards the confidence to act decisively when seconds count.

Event organisers, lifeguard organisations, and private beach venues are well-advised to equip their lifeguard staff with proven technology, built to last and designed to save lives. This board's construction isn't just about function; it's about offering peace of mind to those who rely on it in the most critical moments. With its innovative design and high-quality materials, the Soft Top Rescue Board stands as a testament to what can be achieved when safety and performance are prioritised.

Features :

- Full Soft PE thermoformed deck for comfort and grip.
- Solid rubber nose and tail bumpers for added protection and durability.
- Fiberglass reinforced Secure Cell EPS construction.
- Wood reinforcement in the center area for added durability.
- Soft Slick HDPE bottom.
- GORE® Air Vent.
- Poly-reinforced tube handles along the rail, covered by nylon webbing, 8 grips per side.
- US 10 Fin Box.
- Designed-to-spec rescue fin in line with ILS rescue board standards.
- Weight 12kg +/-.

BOARD SOCKS

NSP board socks are designed as a lightweight cover for your surfboards to help prevent minor dings and/or stop wax rubbing onto unwanted areas (car seats).

The rounded nose area fits most mid-length and longboards, while the 6'6" and 7' board socks have a pointy nose shape.

Made from a stretch terry towel material that retains its elasticity, The nose on the socks has an additional 600D material to prevent impact damage.

TIE DOWN STRAPS

NSP's heavy-duty Tie Down Straps are ideal for securing your surf, foil and SUP boards to the roof of your car. Made with strong, yet soft nylon straps that will easily secure your boards without scratching the board. The heavy-duty cam buckles are encased in a padded EVA to prevent damage to your board or car.

Available in one size only: 15'7" (475cm)

•NACR0901

ROOF RACK PADS

NSP subtly branded roof rack pads easily attach to your existing roof racks for a padded landing for your surf, sup or foil boards. The Roof Rack Pads are designed with a foam core wrapped in a durable 600D water-resistant fabric and fit most standard sized round or square roof racks.

Available in one size only: 17" pads

•NACR0902

SOFT ROOF RACKS - SINGLE & DOUBLE

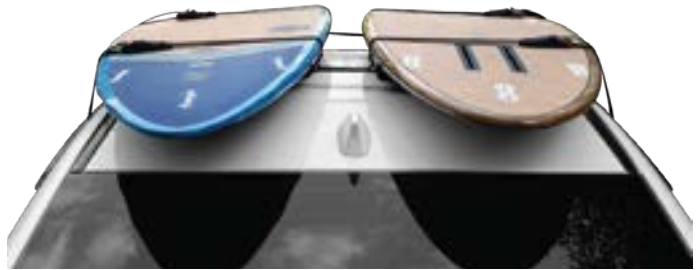

NSP's Soft Roof Racks are perfect for carrying your surf, SUP, or foil boards to the beach on the roof of your car.

The Soft Racks are secured with heavy duty nylon straps that are designed to wrap around the inside of your car while safely securing your boards to the roof. The durable cam buckles keep your boards in place without sliding during transport. The Soft Racks are designed to work on most vehicles.

Available in a Double or Single rack sizing.

Features:

- Single racks hold up to 3 shortboards or 2 longboards.
- Double racks hold up to 6 surfboards.
- Universal fit for most cars, trucks and SUVs.
- Thick, long length nylon straps.
- Heavy-duty, corrosion-free buckles encased in padded EVA to avoid scratching the vehicle.
- Water-resistant, durable, nylon-wrapped, soft rubber pads.
- Compact size and easy to store.
